

WHAT IS CLAIMED IS:

1. An internal arrangement of a computer case, which clear a space between a second access unit and a motherboard by changing an allocation of a first access unit, comprising:

5 a case; and

at least one first access unit installed in an upper portion of the case;

wherein the first access unit is allocated in the upper portion of the case allowing air entering the case to flow and deliver heat source to the back of the case.

2. The arrangement of Claim 1, wherein the case includes a bottom portion,
10 a front panel and a rear panel adjacent to two opposing sides of the bottom portion, the front and rear panels form a receiving space.

3. The arrangement of Claim 2, further comprising a motherboard disposed within the receiving space over the bottom portion.

4. The arrangement of Claim 2, further comprising a second access unit
15 under the first access unit within the receiving space.

5. The arrangement of Claim 4, wherein the second access unit includes a 3.5" floppy disk or a compact disk drive.

6. The arrangement of Claim 2, further comprising a plurality of connectors with various pins, a heat dissipation device and a power supply installed on the rear
20 panel.

7. The arrangement of Claim 2, further comprising a pair of support members extending between the front and rear panels, wherein the support members form a space for receiving the first access unit therein.

8. The arrangement of Claim 1, wherein the first access unit includes a box
25 member and a hard drive disposed in the box member.

9. The arrangement of Claim 8, wherein the box member includes a plurality of connection members formed along a periphery thereof to be fitted with the support members.

10. The arrangement of Claim 8, wherein the box member includes a terminal at one end thereof.
